

Delivering SAP GRC implementation solutions.

At Turnkey Consulting we can provide consultancy services around the full range of SAP Governance, Risk and Compliance (GRC) products, with a level of implementation and project management experience that is unrivalled in the UK.

Compliance Calibrator and Firefighter Turnkey Consulting has a complete end-to-end SAP GRC delivery capacity.

Compliance Calibrator implementations will typically break down into three distinct phases:

- Rollout design, Technical Implementation, and Piloting
- Rule Customisation and Mitigating Controls
- Post analysis remediation phase, and end user training

At Turnkey Consulting we have consultants with experience of multiple implementations of the various Compliance Calibrator versions who can provide expert advice, and the benefit of previous experiences, to assist you in creating the right strategy for your CC Implementation and rollout.

Access Enforcer Our network of SAP security and GRC consultants is extensive and covers all modules and industry sectors.

As the GRC product with the highest impact on end users it is critical to get Access Enforcer implementations right first time. Our experienced consultants can provide expert assistance to ensure that all solutions from technical architecture to workflow design are appropriate to your business, ensuring that you get the maximum return on investment possible.

Role Expert We have adapted our existing KeyMethod roadmap to cater for the implementation of SAP GRC.

Integrating Role Expert into your SAP security build and design allows your business to have a truly standardised and compliant security build. Our SAP security experts can guide you through the tool installation, incorporating best practices in the Role definition framework to ensure that your organisation is able to take full advantage of the Role Expert toolset and achieve role maintenance efficiencies as a result.

Process Controls Our consultants have deep business process control experience.

Implementing SAP Process Controls completes the automation of your SAP Security and Controls and allows your managers to focus on running the business rather than monitoring it. By consolidating controls results into a single dashboard the toolset allows management to view exceptions on a real time basis and prevent rather than react to issues.

Our Business Process Controls experts can assist in all aspects of a SAP Process Controls implementation from defining the implementation strategy through to technical customisation and remediation activities.
