RISE with SAP Security is a Shared Responsibility

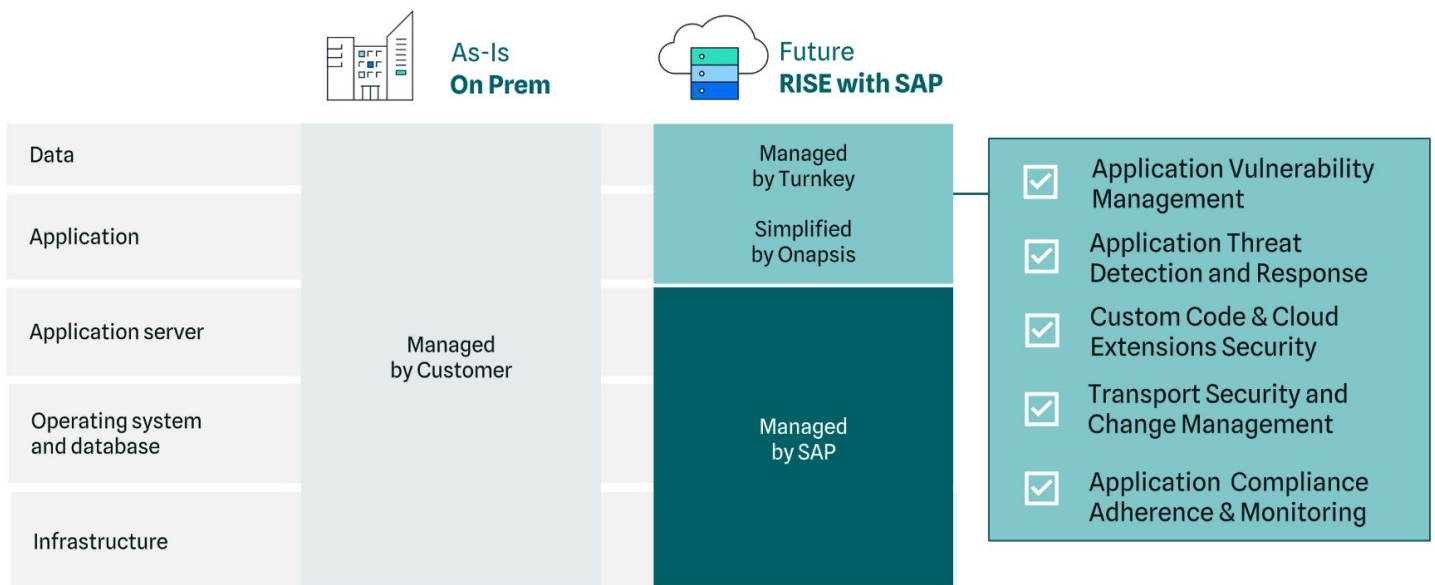

Having clarity on who does what and the potential gaps between you, SAP, and your systems integrators (SIs) is essential for your migration.

Mind the gaps, better manage risks, migrate smoothly, and ensure a more resilient future for your business with support from Onapsis and Turnkey.

The Shared Responsibility Model

RISE with SAP modernizes your deployment model, but it doesn't transfer responsibility for securing your SAP applications, configurations, or business-critical data. While SAP manages the infrastructure, the security of what runs inside your systems—particularly at the application layer—remains your responsibility.

As preferred partners of SAP for security solutions, Onapsis and Turnkey Consulting work hand in hand to help you manage your security responsibilities with confidence.

The Onapsis Platform delivers continuous visibility and protection across the SAP application layer, identifying vulnerabilities, misconfigurations, and compliance gaps. Turnkey Consulting provides the implementation expertise, managed services, and operational support to ensure security effectiveness across your environment.

Our joint approach combines advanced threat detection with services tailored to your risk profile.

"In the context of SAP RISE, the customer still keeps the ownership and responsibility to secure the application layer"

Roland Costea

Global Chief Security Officer for
SAP Enterprise Cloud Services
