SOLUTION

RISE with SAP License Review

RISE right. Reduce license fee exposure with authorizations aligned to usage and security priorities.

Considering the cloud? Start by right-sizing your security model. SAP now bases license fees on assigned authorizations, not system usage. Consequently, companies with excessive authorizations face inflated license costs.

Turnkey's RISE with SAP License Review examines your SAP usage to produce a license target based on the principle of least privilege. We can then support role remediation or redesign to help you reduce costs, strengthen security, and streamline user experience.

How it works

Applying our accelerator-driven methodology, Turnkey analyzes your data and advises on how to optimize your SAP license requirements. **You receive:**

- A target state license model based on actual system usage versus role allocation.

- User analysis identifying discrepancies between assigned and utilized transactions and functions.

- Quick win opportunities for user and/or role-level remediation.

- Role impact assessment, evaluating roles potentially requiring redesign.

- Roadmap outlining steps to achieve your optimal security and license model.

Benefits to your business

Reduce SAP licence fees

Improve process efficiency

Reduce compliance risk

Streamline user experience

Align security to business goals
