

Extending enterprise IGA to SAP

S/4HANA adoption, GRC changes, and cloud migration are reshaping SAP environments — making now the ideal time to bring SAP into the scope of your identity governance program. With 20+ years of experience leading both SAP security and IAM programs, Turnkey is uniquely positioned to help you integrate SAP into a unified, enterprise-wide IGA approach.

The integrated way forward

Why integrate SAP and IGA?

- ▲ Govern access transparently and efficiently through a single pane of glass.
- ▲ Improve compliance and reduce overhead with centralized access, controls, and policies.
- ▲ Connect your workforce to appropriate access, wherever and however they work.
- ▲ Enhance privilege visibility and gain access utilization insights.
- ▲ Optimize security by implementing appropriate access controls and restricting risky access across your estate.
- ▲ Manage both on-premise and cloud systems simultaneously, accelerating your transition to the cloud without blind spots.

How Turnkey can help

- ▲ Assess your maturity through stakeholder workshops and document review.
- ▲ Devise a strategy, target operating model, and business case for enterprise IGA deployment.
- ▲ Guide vendor selection and negotiation on your behalf.
- ▲ Implement your strategy and preferred enterprise solution across SAP and all other applications in your estate.
- ▲ Enable effective collaboration between SAP and Identity teams.
- ▲ Optimize your IGA solution continuously through our Bedrock Managed Service.

Benefits to your business
